

### Technics Tip (Simple Edit)

Have you wanted to make soft piano voice an octave lower than normal, it's easy with easy edit. So here's how select from **Sound Group– Piano - Concert Grand** say for (Right 1) then go to **Program Menu – Sound Edit – Easy Edit** – select **Brilliance** and lower it to – 4, next select **Octave shift** to - 1 and finally re-name your piano sound (**WRITE**) *Cols low Grand*, then save it to a memory location *Memory Bank 1* for example, and press ok. Your new sound is saved; you should back it up to floppy disk for safety. Now isn't that easy! All other sound can be edited in this way and mess about with the other parameters, to see what they do! And save any you like to other locations of your choice and start to build up your own library of your sounds, have fun, more tips next month.
