

My Registration method of getting 24 Registrations from one bank of 8 registrations (1 to 8)

In my illustration I have used my Custom Theater Organ Voices, but it could be used with any sounds. The system is based on having any **two**, of the **three, right hand voices playing as one registration.** Even more permutations could be formed using the Left Voice as well, 'either on or off.' But keeping it simple using any two of the three voices will give you the idea!

To use this method's full potential follow the illustrations below.

Setup 1. With Registration 3, Right 1 and 2 are selected and glow as below.

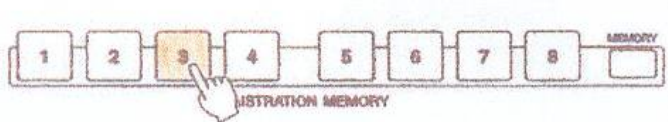

Setup 2. With Registration 3, Right 1 and 3 are selected and now these glow.

Setup 3. With Registration 3, Right 2 and 3 are now selected so now these glow.

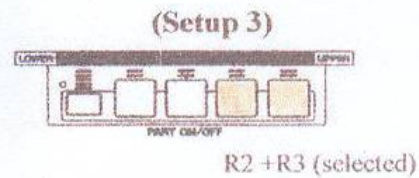

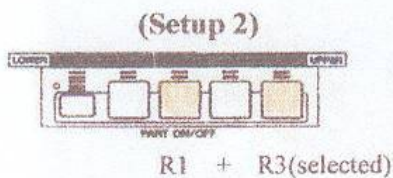

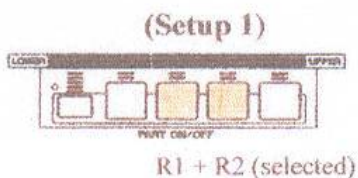

From the above text and the illustration below, recapping all you do is to press any lit button and any unlit button, so it's easy to do "on the fly."

And so on for all the Registrations (buttons 1 to 8)

See illustration below

Registration 3 used for our example

This can be used with any keyboard have three right hand voices, so will work for Tyros (1) as well as Ty2.

Colin.
